REYNALDO G. ALVEZ

RSTUDIO GUI/IDE

The Source Pane is a text editor where you can type your code before running it. You can save your code in a text file called a script. Scripts have typically file names with the extension **.R**

A screenshot of the R console window. The window title is "Console". The text inside shows the R version 3.4.3 (2017-11-30) and copyright information. It also includes instructions on how to use the console, such as typing 'license()' for the license, 'contributors()' for contributors, 'citation()' for citations, 'demo()' for demos, 'help()' for help, and 'q()' to quit. A blue rectangular label with the text "Console Pane" is overlaid on the right side of the console text.

```
Console
R version 3.4.3 (2017-11-30) -- "Kite-eating tree"
Copyright (C) 2017 The R Foundation for Statistical Computing
Platform: x86_64-w64-mingw32/x64 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

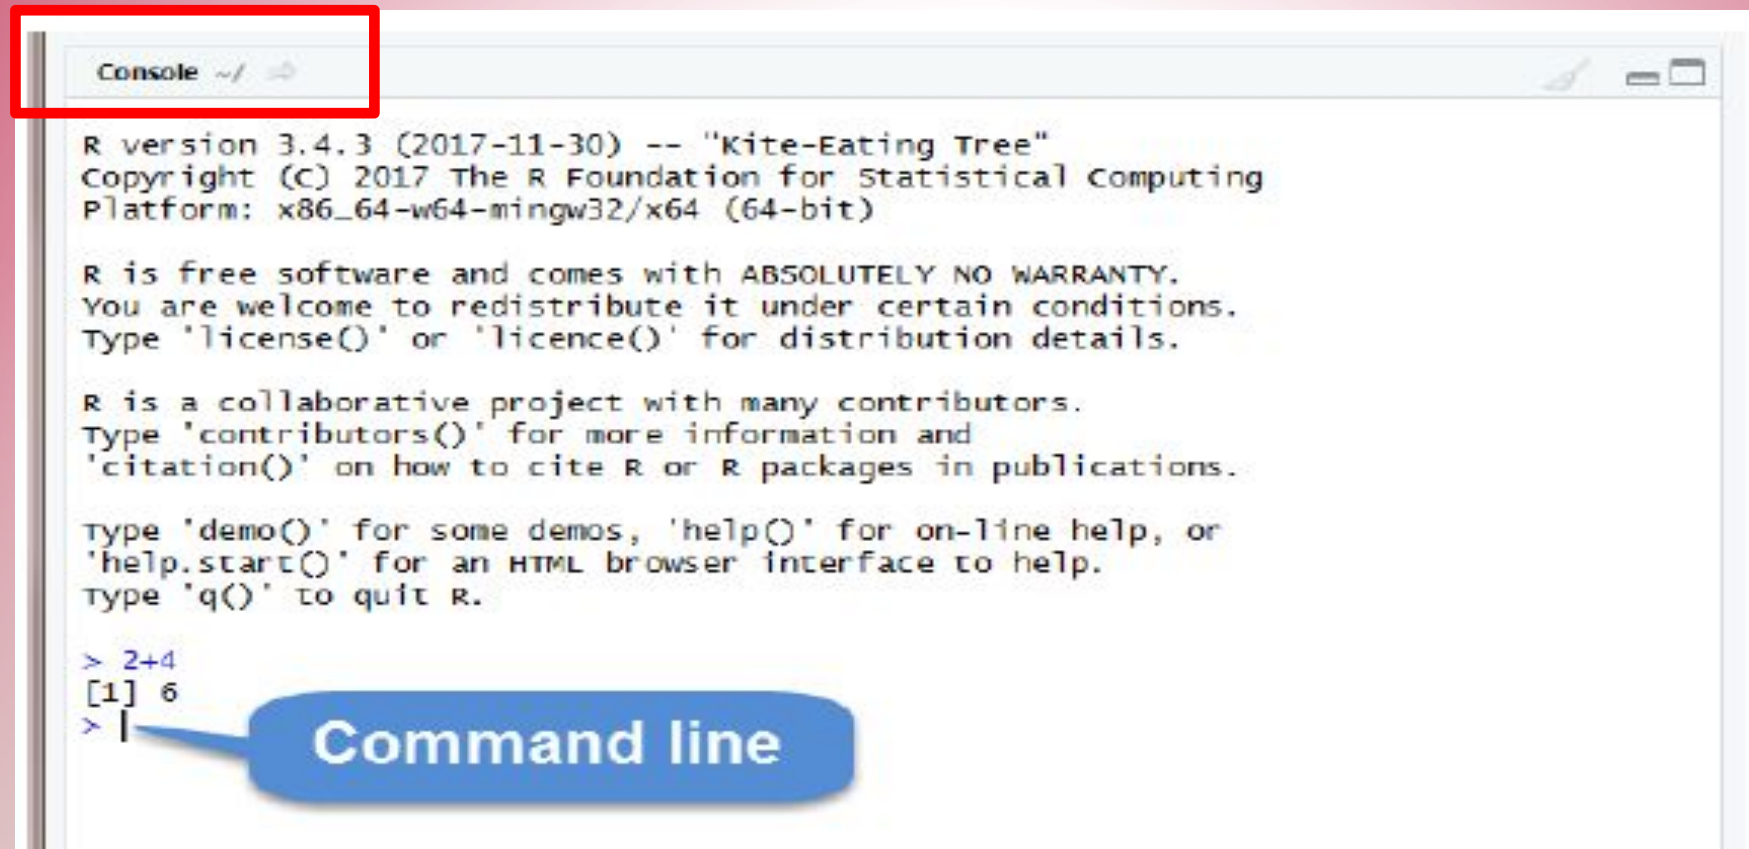

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

> |
```

The Console Pane is the interface to R. If you opened R directly instead of opening RStudio, you would see just this console. You can type commands directly in the console. The console displays the results of any command you run.

To clear the console, you press **Ctrl+L** or type **cat("\014")** in the command line.

The image shows a screenshot of an R console window. The title bar at the top is highlighted with a red rectangle and contains the text "Console ~/". The main area of the window displays the R startup message, including the version (3.4.3), copyright (2017), and platform (x86_64-w64-mingw32/x64). It also provides instructions on how to use R, such as typing 'license()' for distribution details, 'contributors()' for more information, 'citation()' for citing R, 'demo()' for demos, 'help()' for on-line help, and 'q()' to quit R. At the bottom, the prompt ">" is followed by the command "2+4", which has been executed, resulting in the output "[1] 6". A blue callout bubble with the text "Command line" points to the prompt ">".

```
Console ~/

> 2+4
[1] 6
> |
```

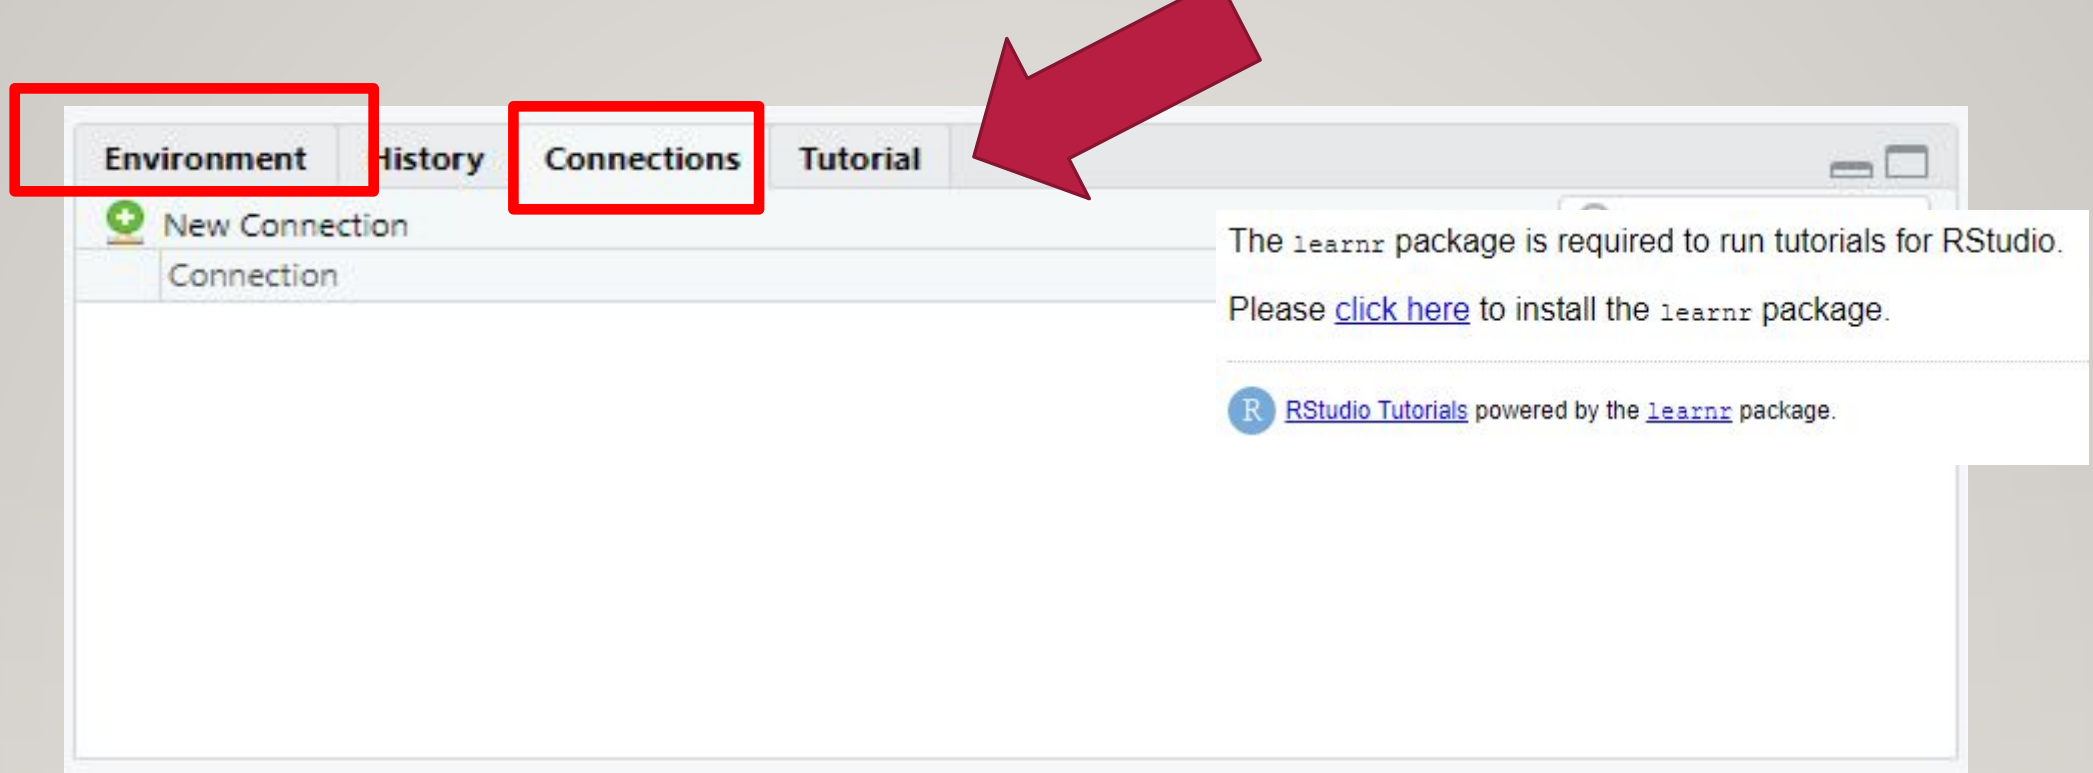

Command line

```
input.r x  Untitled1* x
1 int_var <- c(10L, 2L, 5L)
2 |

2:1 (Top Level)

Console Terminal x Jobs x
~/
> x<- c(2, 5, 3, 1)
> y <- c(10, 2, 4, 7)
> z <- c(1, 4, 2, NA)
```

Environment		History	Connections	Tutorial
R		Global Environment		
Values				
int_var	int [1:3]	10	2	5
x	num [1:4]	2	5	3 1
y	num [1:4]	10	2	4 7
z	num [1:4]	1	4	2 NA

The Environment Pane includes an Environment and a History tab. If you are using RStudio 1.1 or a later version, you will also see a Connections tab. The Connections tab makes it easy to connect to any data source on your system. You will not see this tab on previous versions of RStudio.

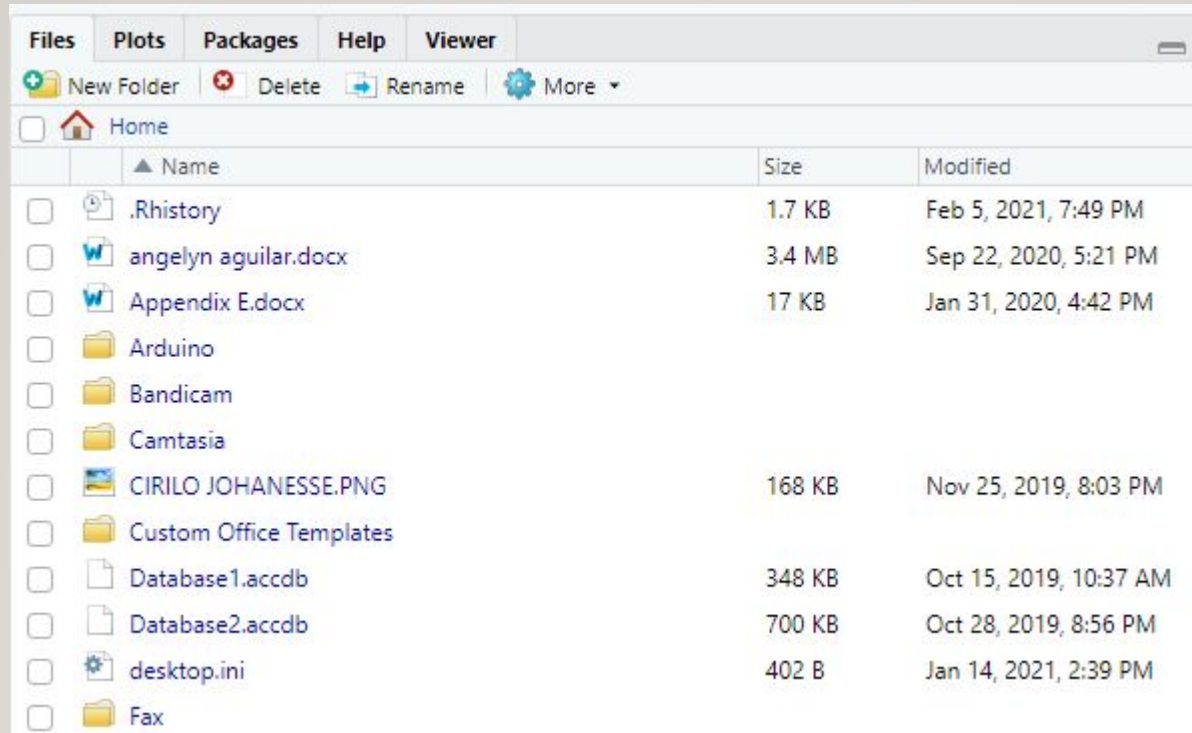

History Tab on Environment Pane

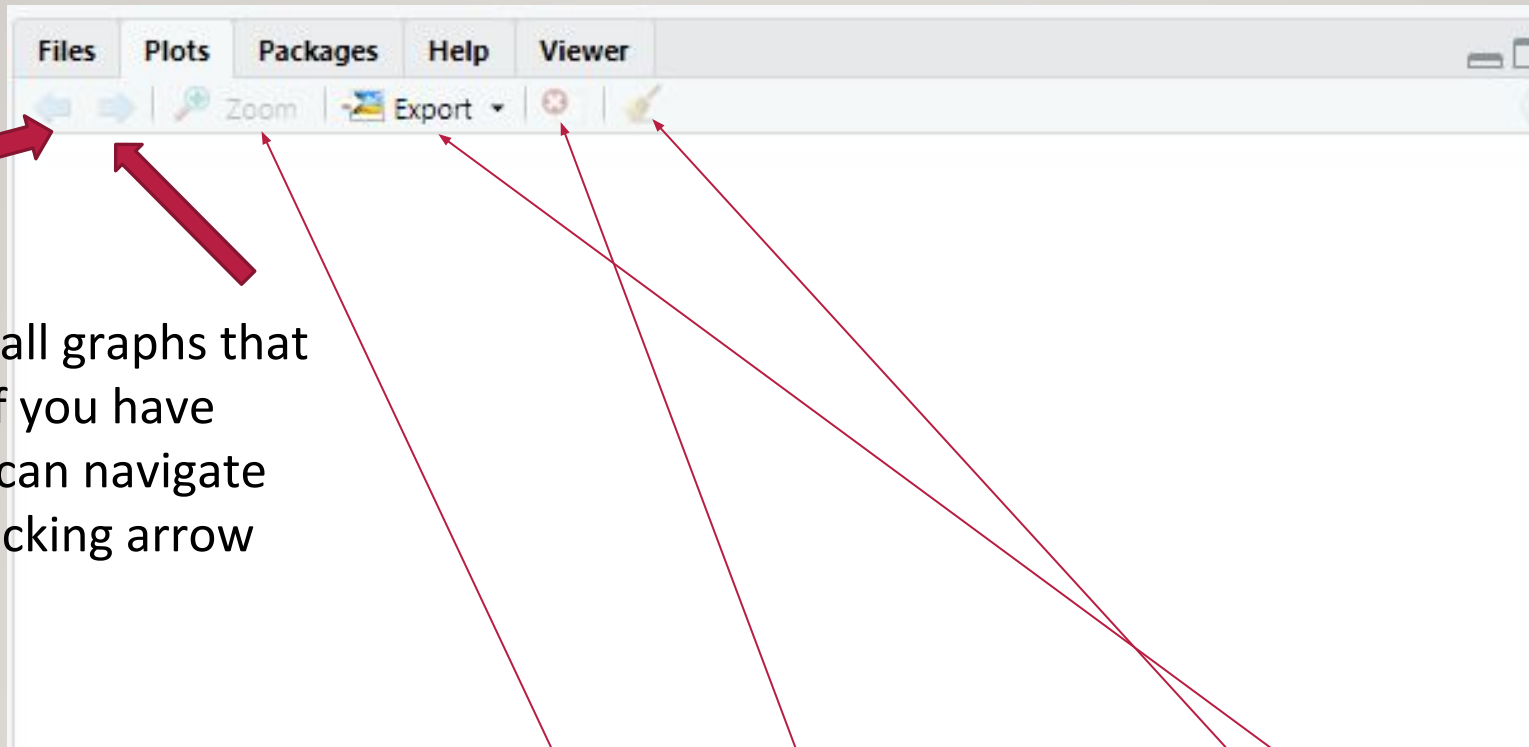

The History tab keeps a record of all the commands you have run.

To copy a command from the history into the console and source or clear the history.

FILES Pane

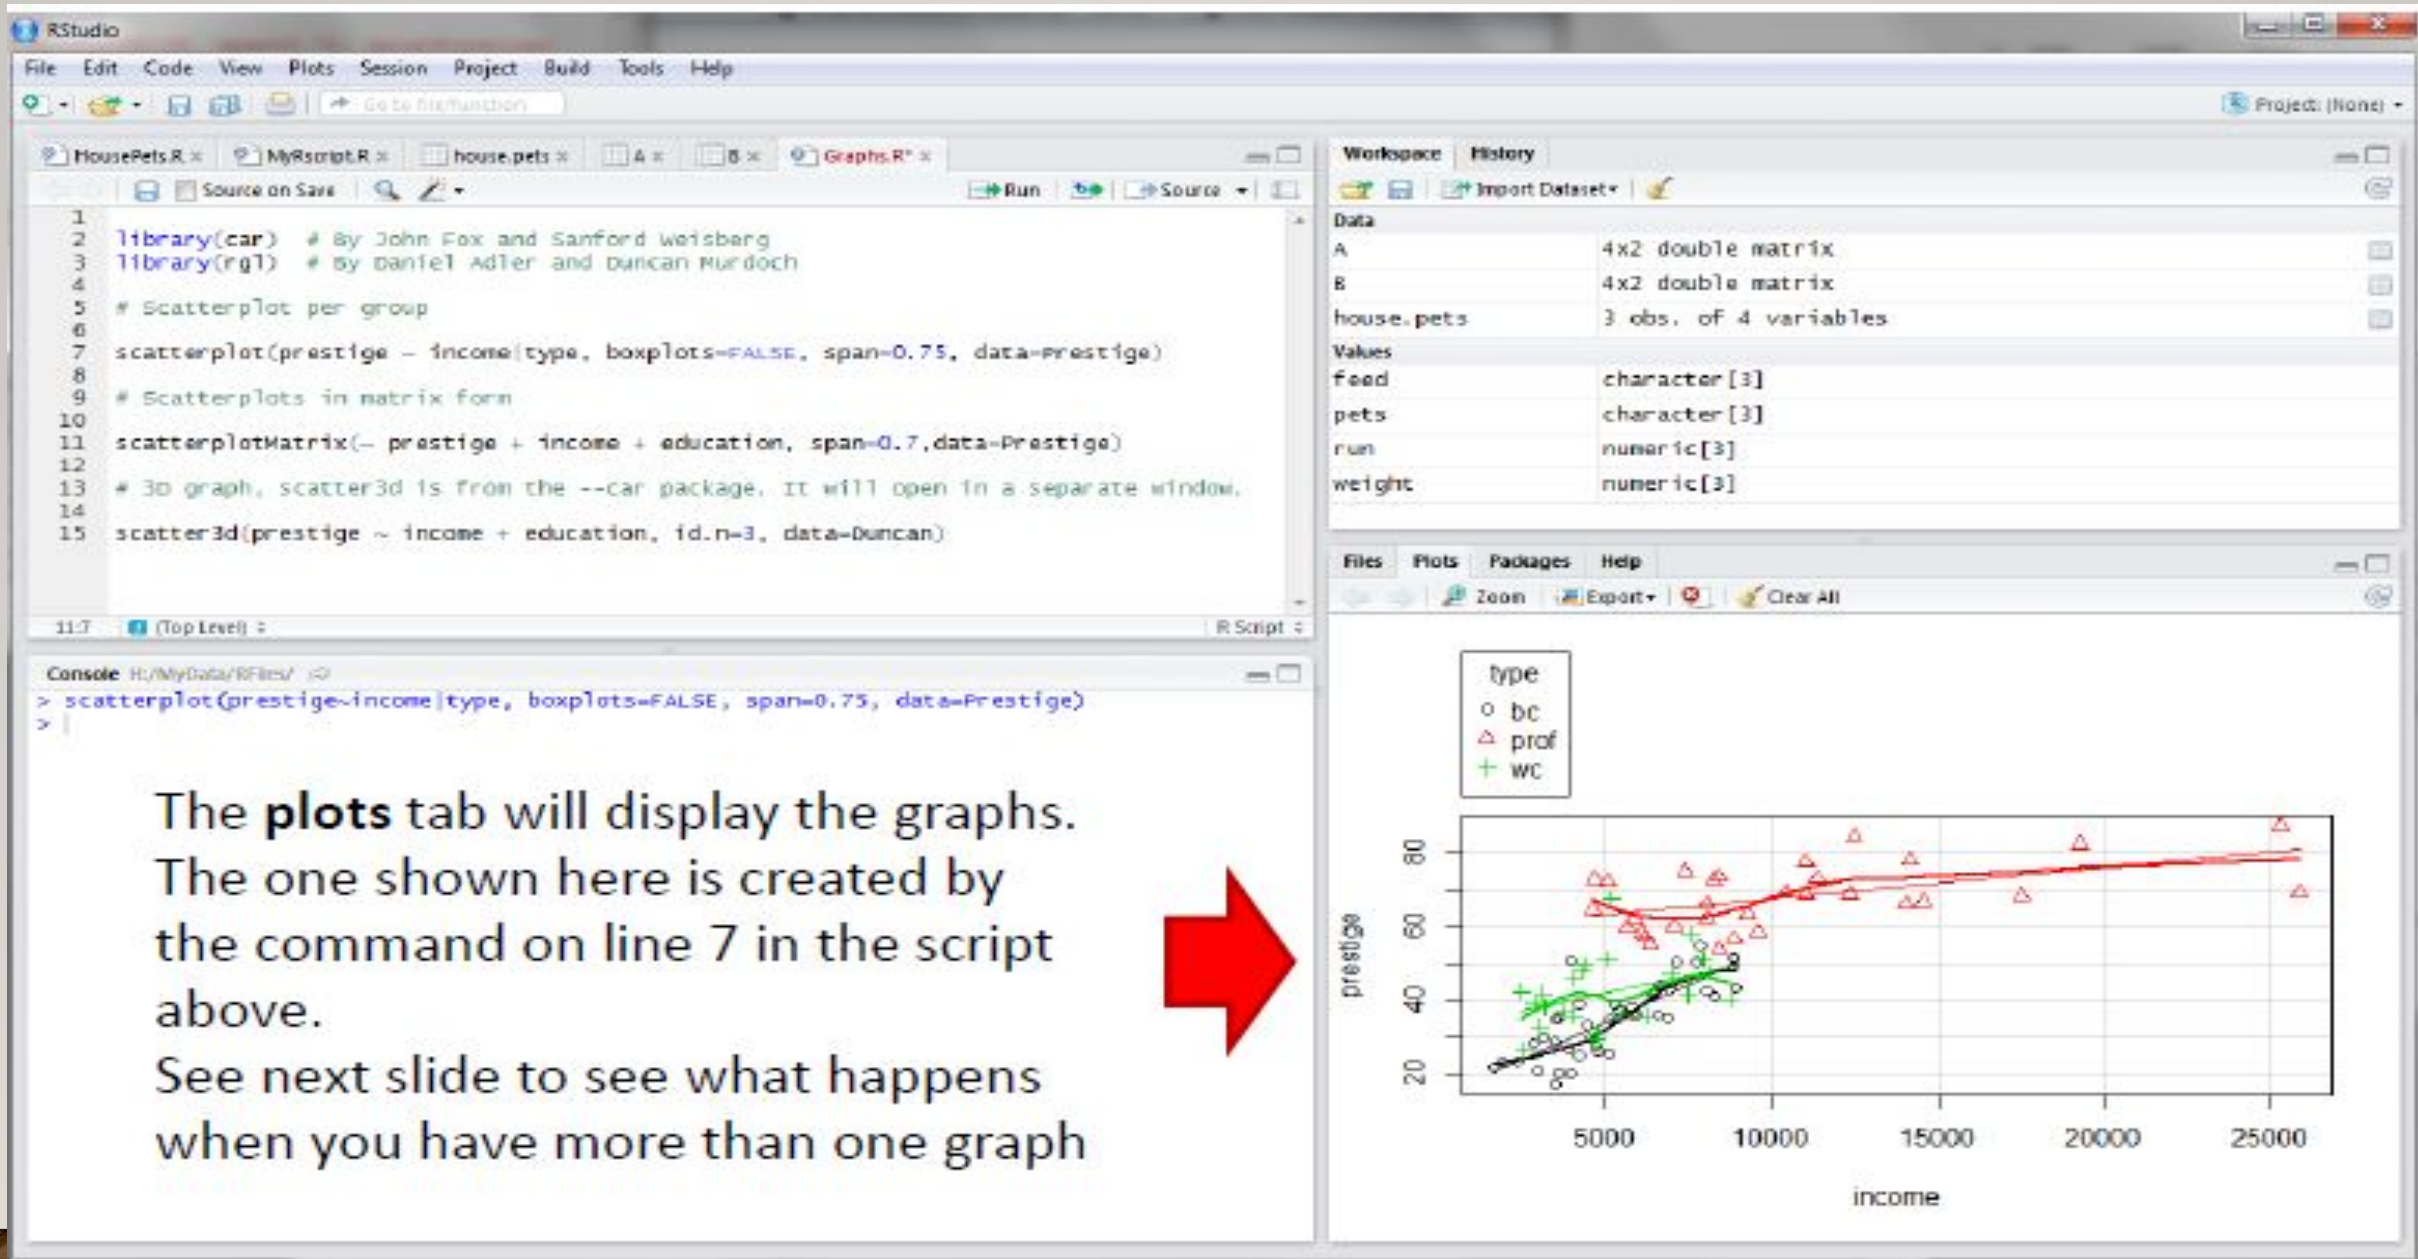

The Files tab displays the contents of your working directory. R reads files from and saves files into the working directory. You can find out which directory R is using by typing **getwd()** in the command line.

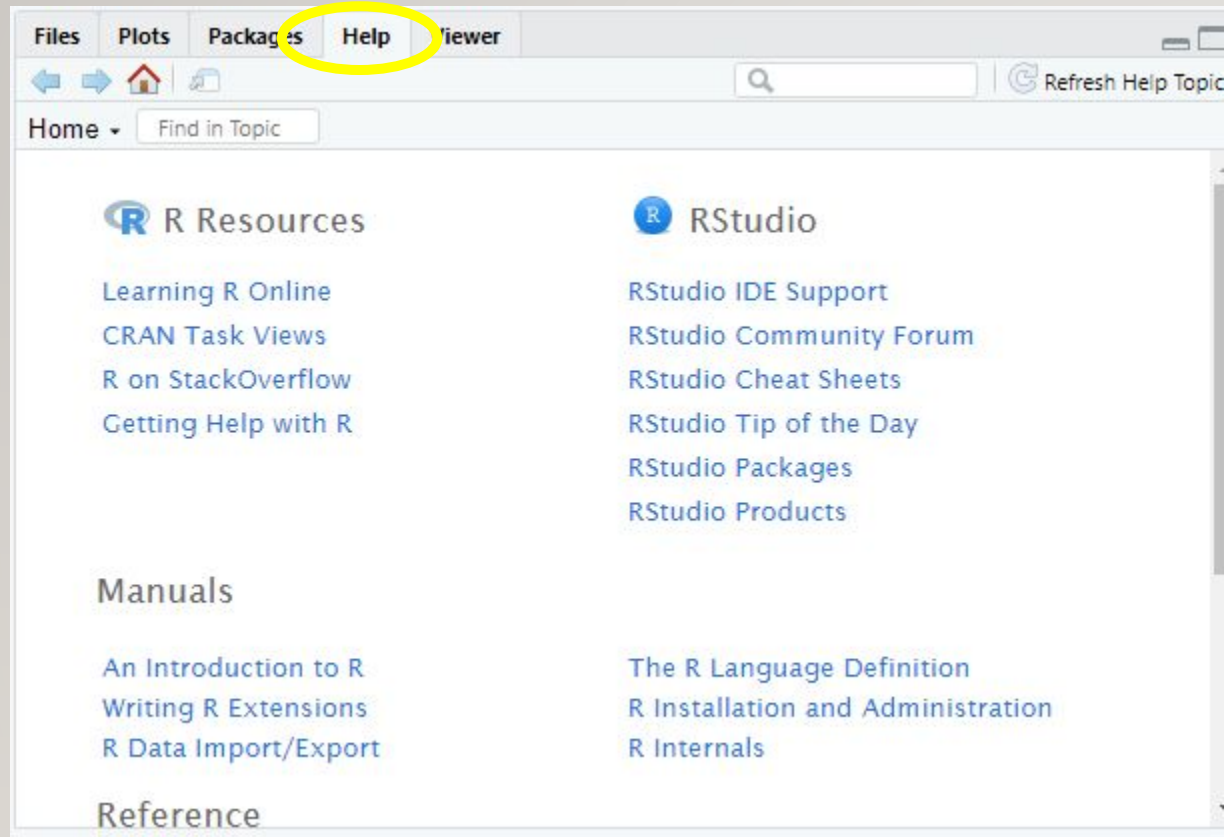

The Plot tab shows all graphs that you have created. If you have multiple plots, you can navigate through them by clicking arrow left and right.

Click Zoom to open the plot in another window. Click to export your plot as an image file or a pdf.

To remove a single plot, click “x”. To remove all plots, click brush icon or type **dev.off()** in the command line.

HELP TAB

The help tab has built-in documentation for packages and functions in R. The help is automatically available for any loaded packages.

The Viewer tab displays HTML output. R packages such as R Markdown and Shiny create HTML outputs that you can view in the Viewer tab.

The Menu includes drop-down menus as well as buttons for opening, saving, and viewing or editing datasets. Here we list a few of the things you can do from each drop-down menu:

File: Create new file, save data, open previously saved file.

Edit: Search for text, clear console, undo/redo.

Code: Insert code sections, run code.

View: Move around tabs without clicking.

Plots: Save Plots, Navigate through Plots.

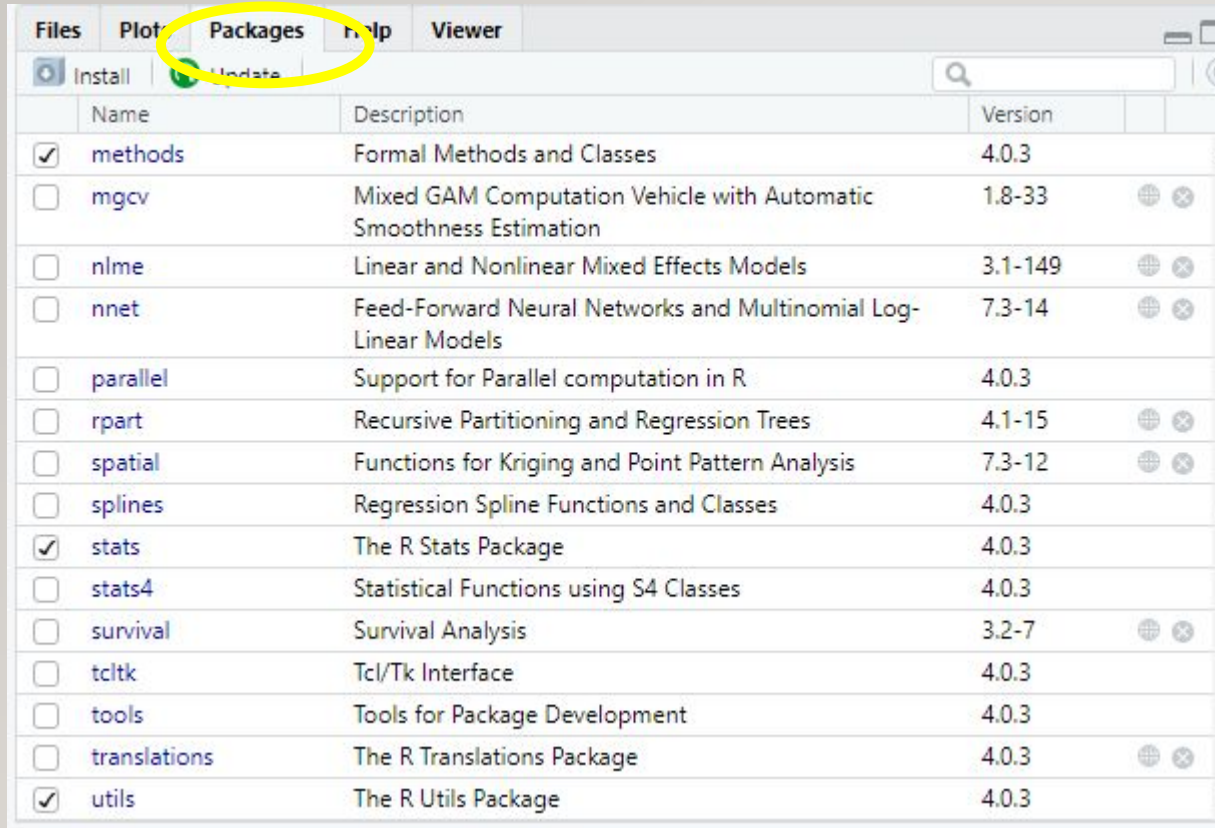

Session: Restart R session, set working directory, save session.

Build/Debug/Profile: Advanced tools for programming

Tools: Install packages, get information on version of RStudio

Help: Help files, cheat sheets, and links to documentation.

PACKAGES TAB

	Name	Description	Version	
<input checked="" type="checkbox"/>	methods	Formal Methods and Classes	4.0.3	
<input type="checkbox"/>	mgcv	Mixed GAM Computation Vehicle with Automatic Smoothness Estimation	1.8-33	 
<input type="checkbox"/>	nlme	Linear and Nonlinear Mixed Effects Models	3.1-149	 
<input type="checkbox"/>	nnet	Feed-Forward Neural Networks and Multinomial Log-Linear Models	7.3-14	 
<input type="checkbox"/>	parallel	Support for Parallel computation in R	4.0.3	
<input type="checkbox"/>	rpart	Recursive Partitioning and Regression Trees	4.1-15	 
<input type="checkbox"/>	spatial	Functions for Kriging and Point Pattern Analysis	7.3-12	 
<input type="checkbox"/>	splines	Regression Spline Functions and Classes	4.0.3	
<input checked="" type="checkbox"/>	stats	The R Stats Package	4.0.3	
<input type="checkbox"/>	stats4	Statistical Functions using S4 Classes	4.0.3	
<input type="checkbox"/>	survival	Survival Analysis	3.2-7	 
<input type="checkbox"/>	tcltk	Tcl/Tk Interface	4.0.3	
<input type="checkbox"/>	tools	Tools for Package Development	4.0.3	
<input type="checkbox"/>	translations	The R Translations Package	4.0.3	 
<input checked="" type="checkbox"/>	utils	The R Utils Package	4.0.3	

An **R package** typically includes code, data, documentation for the package and functions inside, and tests to check everything works as it should.

The variety of R packages is one of the reasons R is so powerful. As of February 2017, there were over 12,000 packages available in the official R repository (<https://cloud.r-project.org/>).

SOURCES OF Packages:

CRAN (Comprehensive R Archive Network)
CRANTASTIC
Git Hub
