

Let's do this!

Systems Fundamentals Activity 1

A. Take the Challenge!

1. Classify the hardware components of a computer system that are required to reach an optimal functionality.
 - The Power Supply Unit (PSU) may not be the most commonly discussed PC component, but

it is an essential component of any desktop. Powering your entire system is a critical role, and choosing the wrong one could be costly.

2. Find or take a photo of any computer system build that you personally find appealing in both visual and technical standards.

3. What operating system do you prefer? Explain why.

WINDOW 10 - I prefer Windows 10 because it's user friendly.

4. If you were to build your own OS, what would be its 3 unique features?

- Window 10 but with enhance or upgraded features
 - Upgraded snipping tool: whole web page screenshot and scrollable screenshot
- Built in screen recorder
- RAM cleaner and application speed enhancer.
